

Document Destruction Plants

1-2 Ton / Hr Confidential Shredding System *

Semi-Automatic Channel baler (Factory Refurbished)
AXO 608e Hi-Torque Electric shredder 16mm cut.

Autobaler designed and integrated the system to operate automatically, and as simply as possible, requiring the operator only to empty the sacks or archive boxes into the feed hopper then tie the bales off when the bale was ready.

This is a cost effective entry level system

By producing 'mill sized bale' the full value of the sale of the shredded paper can be recovered.

*dependent of shredder model

Autobaler offer a range of industrial document shredders to meet the security level required by your clients', ranging from 800kgs/hr upto 4ton/hr in a single unit.

Larger capacities are accommodated by employing pre-shredders which reduce the paper bulk and with a final shred size to meet you requirements.

Automatic Document Destruction system

For systems above 1Ton/hr automatic baling should be considered and above 2Ton/hr a necessity.

The systems are automatically controlled, built to comply with the latest safety regulations and for ease of operation.

A shredding system is more than a shredder and baler, at ECS Ltd we have built system that not only shred documents but also consider how the process would fit with the existing operation, for easy of operation, reduced house keeping and minimising dust (all our feed conveyors and shredder hoppers are enclosed).

Our system are all designed and built to order, ensuring that the system meets you specific needs.
